INNOVATE MOTORSPORTS

OT-2

INSTALLATION OF THE OT-2 IS AS SIMPLE AS PLUGGING INTO THE OBD-II PORT ON THE VEHICLE. THERE IS NO NEED FOR ADDITIONAL WIRES.

When Apple unveiled the original iPhone in 2007, our heads immediately started buzzing with all of the automotive possibilities. Since then, the industry witnessed everything from cars remotely driven by Apple's smart phone to an array of accelerometer-based apps that provide accurate 0-60 and quarter-mile times. While all cool, few gave users a peek inside the ECU. The engineers at Innovate Motorsports went above and beyond with the new OT-2, an interface allowing users to transform their iPhone into a wireless gauge, data logger, efficiency meter, dyno and OBD-II scanner.

The system is a must-have for anyone struggling to master their own tuning. The OT-2 works by plugging into a vehicle's OBD-II port. Once installed, it wirelessly transmits data from any of the vehicle's sensors straight to the iPhone, iPod Touch or PC. Users can select any number of channels to monitor simultaneously. Since the OT-2 is capable of data logging at up to 12 times per second, the OT-2 leaves nothing to miss.

The kit also enables the use of the company's performance meter. It providing accurate 0-60 times and a horsepower calculator and timers for 1/8 mile and 1/4 mile runs using the iPhone G-sensors and information from the OBD-II data.

The Innovate Motorsports piece also includes a handy efficiency meter that keeps track of a number of parameters. With the OT-2, information like miles-per-gallon and gallons-per-minute are just a tap of your iPhone screen away. Even more impressive, the OT-2 can read trouble codes and wirelessly clear them, saving you the hassle of having to run by a shop or the expense of buying a scanner tool.

Given everything the OT-2 system is capable of, one might expect a pretty steep price tag. However, Innovate Motorsports priced the kit at \$179. The LogWorks mobile software can also be downloaded for free from the App store, allowing the use of both the performance and efficiency meters.

The OT-2 is the latest in Innovate Motorsports Modular Tuning System line up, which means current MTS users will be able to jump right in with the new iPhone-compatible technology. 📱

“The Logworks program is free to download off Apple’s App store. Once downloaded the iPhone can connect via wirelessly through the WiFi network.”

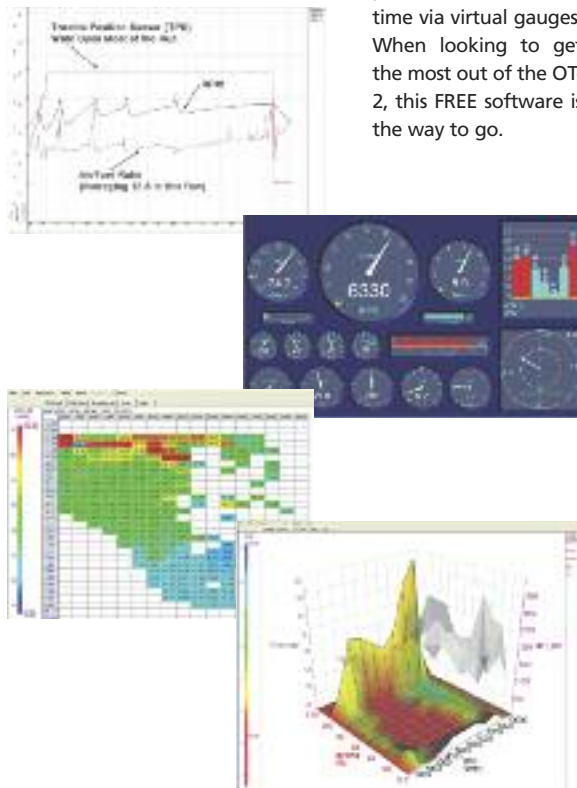

Modular Tuning System

Innovate Motorsports’ products are built around the Modular Tuning System or MTS. Instead of dropping thousands on a full-blown tuning kit, Innovate Motorsports allows users to pick and choose elements that work best for an application. Hardware like the OT-2 can work in conjunction with everything from wide-band air/fuel ratio sensors to multiple gauges. The bottom line is that money is only spent on what is needed. If a build evolves into something more aggressive, it’s easy to seamlessly add components for sophisticated tuning.

LogWorks 3.0

While the OT-2 enables users to download, email performance reports and compare charts with friends, and information on what’s going on under your hood, Innovate Motorsports LogWorks 3.0 is a step into the big leagues when it comes to tuning. The software takes tuning from the iPhone and brings it to a laptop or desktop computer for analysis. Featuring advanced graphing capabilities, LogWorks 3.0 can view an engine’s performance in real time via virtual gauges. When looking to get the most out of the OT-2, this FREE software is the way to go.
